

Zlink Assistant Maintenance & Configuration in One-Touch

Overview

Zlink Assistant is a mobile application designed to provide customers with a more convenient way to operate their devices remotely. The APP targets staffs who are responsible for set up and maintenance of time & attendance terminal or devices with time & attendance function, allowing them to easily connect to devices with smartphones to view, manage, synchronize and export user & attendance data.

Connection Quick Guide

Zlink Assistant provides two connection methods for users, they can easily connect to the APP by scanning the connection QR code on device or manually entering the device IP, port and password. Zlink Assistant has provided a complete connection guide in APP to walk users through step by step.

* Compatible Device

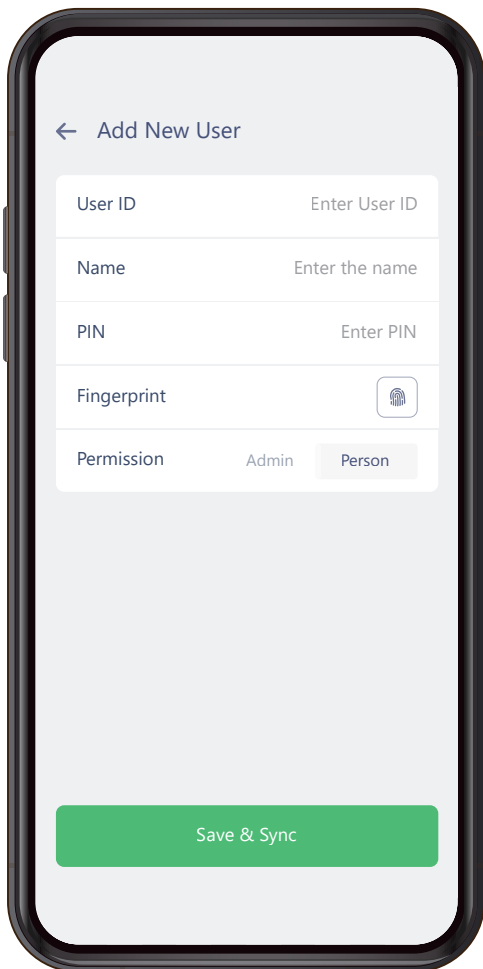

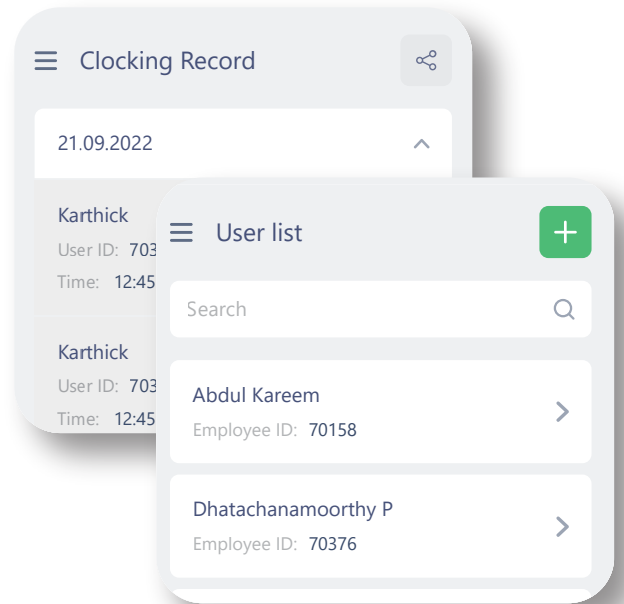

Zlink Assistant is compatible with all devices with firmware versions later than "Standalone Service Ver 2.1.4-20170427". Strongly recommend users to consult authorized distributors for more details.

User Management

All user and attendance data in the connected device can be checked directly via APP. Users can view, modify, delete and add users in the devices via app, and all updates will be synchronized to devices in real time.

Credential Management

Zlink Assistant can remotely control devices to initiate credential enrollment procedure for adding and modifying user's credentials. An in-APP guide will walk users through the whole process.

Zlink Assistant is now supporting credentials of...

Fingerprint

PIN

View & Share Data

Clocking Report module in Zlink Assistant will display attendance data saved in currently connected devices, which also allows data sharing and exporting.
